

Super Dragin™ Mudmate 410

This pump was designed for the concrete cutting industry as a spill control vacuum unit, in particular the cutting of cement aprons at service stations where non electric vacuum is required to prevent a static spark from igniting fuel containers, Mudmate 410 is also ideal for de-watering tanks, trenches or vacuuming up general waste product

Compressed Air Powered means that there are no moving parts as atmosphere & compressed air only passes through the Mudmate, the magnum size 50mm float valve allows high volume of air flow to pass through & Mudmate has been constructed for high vacuum & easy clean down.

Simply fit Mudmate 410 to a 18 gauge 205 Litre drum fitted with 2 m– 50mm (2") threaded ports (drums fitted with removable lids & locking rings are available from us).

Mudmate 410 can also be supplied in a Anti-static kit version with 38mm anti static hose, wand, squeegee & drum connection fittings & hose lengths are cut to suit customer requirements.
